                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 544;
                                            Sequence 8, Application US/09102420B
Patent No. 6084155
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Johnson, Marie
APPLICANT: Ward, Eric
APPLICANT: Ward, Eric
APPLICANT: Ward, Eric
APPLICANT: Ward, Eric
TITLE OF INVENTION: HERBICIDE-TOLERANT PROTOPORPHYRINOGEN
TITLE OF INVENTION: OXIDASE ("PROTOX")
NUMBER OF SEQUENCES: 43
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
ODERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/102,420B
FILING DATE: 22-JUN-1998
CLASSIFICATION: 800

Patent No. 617245
GENERAL INFORMATION:
APPLICANT: Ward, Eric R
APPLICANT: Wolrath, Sandra
TITLE OF INVENTION: Manipulation of Protoporphyrinogen
TITLE OF INVENTION: Oxidase Enzyme Activity in Eukaryotic Organisms
NUMBER OF SEQUENCES: 12
                         94

/dav_stage="plugges" scheen tissue of pluescript II SK+; Site_1: EcoRI; Site_2:
Anoi: The CDNA library was constructed from mRNA isolated
from stem tissue of 1 month old greenhouse grown plants
for the cultivar Raiden. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dry) sequence with a KhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments were
followed by XhoI digestion. The CDNA fragments were
directionally cloned into the EcoRI-XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments were
transformed into DHIOB host cells (GlacoBRL). This library
was constructed in the laboratory of Dr. Randy Shoemaker."

was synthesized with ZAP kit (Stratagene) using poly(A)+
RNA isolated from Aspergillus niger grown in both complete
and minimal media. Synthesis was primed with oligo(dT)
primer/XhoI-linker. EcoRI adaptors were later ligated to
polished ends. EcoRI-XhoI-digested cDNA was ligated with
EcoRI-XhoI-digested pxES2 (Invitrogen Corp). This vector
permits expression of our library in yeast. "

```
DNase-free water. The XhoI site within the first- strand synthesis primer was then restricted by digestion with XhoI from Promega (400/ul); all XhoI sites in the cDNA would be protected by their hemimethylated status. The cDNA constructs were size-fractionated with a 500bp cutoff, using Sephacyl S-500 High Resolution (Pharmacia Biotech) in a 2-mm diameter column and a bed volume of approximately Iml. The column eluent was precipitated, redissolved, and ligated into Stratagene's pBluescript II XR Predigested vector (pBluescript II SKH') vector that has been digested with EcoHI and XhoI, and phosphorylated by Stratagene). This library was constucted in the laboratory of Dr. Paul Kelm and Dr. Virginia H. Coryell at Northern Alzona University."

The patent discloses novel polynucleotides encoding Exophiala spinifera

[Limonisin degradative or transport enzymes such as flavin monooxygenase,

[Limonisin degradative or transport enzymes such as flavin monooxygenase,

[Limonisin degradative or transport enzymes such as flavin monooxygenase,

[Limonisin degradative or processed or an enzyme is useful for

[Limonisin or a structurally related mycotoxin present in

[Limonisin on application to a plant or to harvested grain

[Limonisin or to processed grain that is to be used as animal

[Limonisin or as a slidge. Nucleotide fragments of the present

[Limonisin or useful as probes and primers. They can be introduced

[Limonicorganisms that multiply on plants to deliver enzymes to

[Limonicorganisms that multiply on plants to deliver enzymes to

[Limonicorganisms that multiply on plants to deliver enzymes to

[Limonicorganisms that multiply on plants to deliver enzymes to

[Limonicorganisms that multiply on plants to deliver enzymes to

[Limonicoluced via a vector into a microbial host and the transformed host

[Limonicoluced via the environment, plants or animals for reducing the

[Limonicoluced and used as an incrobial host and the resulting bacteria

[Limonicoluced and used as an incrobial host and the resulting bacteria

[Limonicoluced and used as an incrobial processed or other

[Limonicoluced or the environment of plants and the resulting bacteria

[Limonicoluced and used as an incrobial not engist its toxic effects.

[Limonicoluced or the environment of the resulting bacterial or the ansatz or the plants or the used alone or in combination to engineer microbes or other

[Limonicoluced or the environment of the resulting to the plants or the plants of the plants of the plants or the plants of the plants or the plants of the plants of the plants or the plants of th

The invention relates to genes from Rhodococcus ruber involved in cyclododecanone degradation pathway. A 10 kb cluster from R. ruber was isolated that comprises genes (designated cddb, cddb, cddx, cddx, cddx, cddx, cdds, cddb, cddb, cddx, cddx, cddx, cddv, cddc, and cddb) encoding parames such as dodecanoic diacid synthesizing enzyme, cyclododecanone monoxygenese, lauryl lactone esteraes, 12-hydroxylauric condition of dehydrogenese, 12-you lauric acid dehydrogenese, 14-ydroxylauric acid dehydrogenese, 12-you lauric acid dehydrogenese, Host cells conditioned with cyclododecanone, lauryl lactone when contacted with cyclododecanone, 12-hydroxy lauric acid when contacted with lauryl lactone when contacted with cyclododecanone, 12-hydroxy lauric acid when contacted with lauryl lactone when contacted with cyclododecanone, cyclododecanone and cyclododecanone by contacted with a cyclododecanone cyclododecanone by chocyclododecanone cyclododecanone monoxygense enzyme isolated from a lokb nucleic acid fragment from R. ruber SCI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             19;
                                                                                                                                                                Cyclododecanone, degradation; lauryl lactone esterase; cddh, cddB, cddX, dodecanone monooxygenase; cyclic ketone; cddY; 12-hydroxylauric acid dehydrogenase; 12-oxo lauric acid dehydrogenase; macrolactone; microbiological; cddC, cddb.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated nucleic acids encoding dodecanoic diacid synthesizing enzyme, cyclododecanone monooxygenase for bioproduction of dodecanoic diacid

The present invention describes isolated nucleic acid molecules which encode fumonisin degradative enzymes and transporters from a school content of Marchian Catabolic gene cluster. The Bacterium 2412.1 content was isolated from maize. The nucleic acid molecules can be used for producing an enzyme for detoxifying fumonisin or a structurally related converted grain, or processed grain which is to be convected an animal feed or silage. Runninal microorganisms transformed with the nucleic acid molecules can be used as probiotic compositions or as feed incoulant compositions. Plants transformed with the nucleic acid molecules can be used as probiotic compositions or as feed incoulant compositions. Plants transformed with the nucleic acid molecules can degrade or transport fumonisin. The plants may be e.g. maize, sorghum, wheat, tomach, soybean, alfalfa, sunflower, Brassica, cotton or rice. The products can also be used as detection reagents for fumonisins and related compounds. AAS91253 represents the Bacterium for Catabolic gene cluster, and AAS91254 to AAS91273 crepresent isolated nucleic acids from Bacterium 2412.1 which encode AAS90085 to AAY801286 from Bacterium 2412.1 which encode campulfication of the present invention. AAS91274 to AAS91285 are given in the sequence listing from the present specification but are not seven the present specification but are not seven to the present specification but are not seven to the present specification but are not seven to the present sequence are seven to the present specification but are not seven to the present sequence are seven to the present sequence are set in the sequence are seven to the present specification but are not seven to the present sequence are seven to the present sequence are seven to the present sequence are set in the sequence are seven to the present sequence are seven to the pres

This sequence represents the human flavin-containing mono-oxygenase isoform 2 (hPWO2) protein. The coding sequence (AAV57273) was isolated as a genomic clone (AAV57272) from a bacterial artificial chromosome as a genomic clone (AAV57272) from a bacterial artificial chromosome (BAC) library covering the complete human genome. Clone BAC 123804M was isolated using STS probes and markers based on human chromosome 1 (the filorescence in situ hybrdisation). The BAC clone was digested with restriction enzymes. The fragments were subcloned and the inserts sequenced. The human FWO sequence was identified by homology to known FWO sequences. Fragments of the FWO2 sequence can be used as primers or probes specific for particular alleles, especially the G.1263mac.A mutation. Detection of this mutation allows diagnosis of a predisposition to FWO-associated diseases, particularly the G.1263mac.A mutation allows diagnosis of a predisposition to FWO-associated diseases, particularly where apoptosis is involved, or central nervous system degeneration. Other FWO-related disorders are central nervous system degeneration. Other FWO-related disorders are excessive or inadequate oxidation/metabolism of drugs, toxic xenobiotics or carcinogens. The proteins and cells expressing them can also be used for the blosynthesis/blodegradation, particularly decoxification, of senobiotics (pesticides, herbicides, alabelmaceuticals) and pharmaceuticals) and synthesis of pharmaceuticals, food additives, pesticides and herbicides.
fluorescence in situ hybridisation; homology; primer; allele; mutation; detection; diagnosis; Juvenile wide-angle primary glaucoma; stress; drug; apoptosis; central netrous system; depencration; oxidation; metabolism; xenobiotic; carcinogen; biosyrhhesis; biodegradation; detoxification; pesticide; herbicide; alkaloid; food additive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid encoding iso-forms 2 and x of human flavin-containing mono-oxygenase - useful for diagnosis, treatment and prevention of, e.g. wide-angle primary glaucoma and for synthesis and degradation of compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ĥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tchoumakov

the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous systems, such as peripheral nervous injuries, peripheral nervous shalted nervous systems, such as as a lateral sclerosis, and shy-brager Syndrome. Other uses include the utilisation of the activities such as: Immune systems suppression, Activin/inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemotactic; thrombolytic; drug screening; arthritis; inflammation;

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM48642-AAM42213) with nootropic, humunosuppressant and oytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, and as peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic aleater's, Parkinson's disease, Huntington's disease, amyotrophic disease, special sclenosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, hemostatic and thrombolytic activity, cancer disgnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukemias and constants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                      ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        302 VYDFWAKKTRSRIVNPAKRDLMAPLEPPYWFGTKRSPLESDYYEMLDKPSVEIVNLEQSP 361

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents the human flavin-containing mono-oxygenase isoform x (hFMOX) protein. The coding sequence (AAV57275) was isolated as a genomic clone (AAV57274) from a bacterial artificial chromosome as a genomic clone (AAV57274) from a bacterial artificial chromosome (BAC) library covering the complete human genome. Clone BAC 123HQAM was solved using 575 probes and markers based on human chromosome 1 (the gen's location was confirmed as being in the region 1423-q25 by fluorescence in situ hybridisation). The BAC clone was digested with restriction enzymes. The fragments were subcloned and the inserts restriction enzymes. The fragments was identified by homology to known FMO sequences. Fragments of the FMO2 sequence can be used as primers or probes specific for particular alleles, especially the G.1263mac.A mutation. Detection of this mutation allows diagnosis of a predisposition to FMO-associated diseases, particularly juvenile function of this mutation allows diagnosis of a predisposition to FMO-associated diseases, including toxic and degenerative disorders, particularly where apoptosis is involved, or central nervous system degeneration. Other FMO-related disorders are central nervous system degeneration. Other FMO-related disorders are excessive or landequate oxidation/metabolism of drugs, toxic xenobities or carcinogens. The proteins and cells expressing them can also be used

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polypeptides are useful in gene therapy, vaccines or peptide therapy, The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity is useful may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                 Human, cytokine, cell proliferation, cell differentiation, gene therapy, vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer, leukaemia; nervous system disorder; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAAW80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78123-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides are useful in gene therapy, accines or e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodilatory activity and activity is and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, uncleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      6.1%; Score 184; DB 22; Length 434;

The present invention describes primer sets for synthesising 5602 (full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an olligoucleotide complementary to the complementary strand of a polynucleotide which complementary comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination of complementary strand of a polynucleotide comprises a 3'-end sequence complementary to the complementary strand of a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence and an oligonucleotide which comprises a 3'-end sequence is selected from those defined in the 5'-end sequence. The primer sets can be used in antisense therapy and the specification. The primer sets can be used in antisense therapy and configuration and/or diagnosis of the abnormality of the proteins encoded by compared the primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for AMH13628 and AMH13633 to AAHH3642 represent human amino acid sequences; AMB92446 to AMH13632 to AAHH3639 to AAHH3639 to AAHH3639 to AAHH3639 to AAHH3639 to be present human amino acid sequences; and AAHH3629 to hall invention of the present companies of the aventual of the useful invention of the present companies of the aventual of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  primer sets for synthesizing polynucleotides, particularly the 5602 full-length CDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length CDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    79 KDWTWSCRYPDQKELLSYVHHCDKIRGLR------KDVYFGAEVVDARYARDL---G 126

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19;
                                                                                                                                                                                                                                                                                 A novel for human flavin-contg. monooxygenase (AAR97549) is a microsomal enzyme that oxidises xenobiotics such as drugs, agrochemicals and environmental pollutants. The recombinant enzyme can be obtd. by expression in Saccharomyces cerevisiae host cells transformed with e.g. vector pAFMO carrying the monooxygenase gene (AA731804). The enzyme is useful for metabolising test code. to determine whether they are converted to harmless metabolites or to carcinogens. It can also be used to raise antibodies.

```
A new method to identify differentially expressed prokaryotic genes using a large number of arbitrarily primed polymerase chain reactions comprises separating two populations of microbial cells, where a first population is contacted with a stimulating agent; where a first population is contacted with a stimulating agent; extracting total RNA from both microbial cell populations; amplifying the extracted RNA from both populations by preparing a collection of at least thirty-two different arbitrary primers, where collection of at least thirty-two different arbitrary primers, where contacting each primer conditions where two sets of amplification products are produced; purifying the amplification products generated in the products; identifying the amplification products generated from the second population as differentially expressed genes; and optionally second population as differentially expressed genes; and optionally sequencing the identified differentially expressed genes; and optionally differential display to clone genes using thirty-two or thirty or the wmethod using a greater number of primers has isolated four and one genes, respectively. The new method using a greater number of primers has isolated

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome polynerleotides and in recombinant production of (II). The colynucleotides are also used in disponsitios as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (I) is useful for generating antibodies against it, detecting or to restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inmeding of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on bus and amino acid sequences. Agains patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLG176-ABL3051), expressed DNA sequences (ABLG1840-ABL16175) and the encoded proteins (ABS7737-AB972072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions –
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DAEGGRVAVIGAGATSIQIVQELAKKADGVTMFMRRPSYCLPMRQRTMDRNEQTAWKAYY 238
